

CONDUIT / VENTURES

Senior Software Engineer, Frontend (Remote or Boulder, CO)

ABOUT CONDUIT VENTURES, INC. /

At Conduit Ventures, we're passionate about enabling our clients to dream big, build fast, and accelerate growth.

We are a technical consulting group and venture lab that partners with high-growth startups to help them identify and overcome specific technical challenges.

The C/V team has experience shaping the software development culture of startups across the country. Combining a startup mentality with a unique skill set developed at leading global tech companies, the C/V team puts an emphasis on service above all else.

POSITION DESCRIPTION /

Conduit Ventures is seeking a software engineer with three or more years of experience in shipping production frontend web applications. We're constantly evolving, learning, and adding new expertise to our team. We're looking for passionate learners who are ready for new challenges and enjoy using the latest technologies.

The C/V culture promotes a creative and engaging environment where new and innovative thinking is celebrated. In this position you will be responsible for developing web-based applications with the rest of the C/V team. You must have a highly-refined skill set, a passion for learning new things, and an incredible sense of current market trends and emerging technologies.

All C/V team members focus on:

Strategy: Identifying opportunities to support the continued growth of C/V.

Relationships: Establishing trust in order to effectively support our clients.

Execution: Building and deploying real and meaningful products and solutions.

CONDUIT / VENTURES

JOB RESPONSIBILITIES/

Working together:

- Be a highly effective communicator. We're a distributed team, so strong communication skills are essential
- Prioritize the client's business needs and relate them clearly to our technical work

Project execution:

- Effectively develop, manage, and monitor timelines, tasks, deliverables, budgets, and resources
- Work cross-functionally with production, graphic design, and content creation teams to provide clear direction for on-time deliverables
- Appropriately document all activity/learnings and then effectively disseminate that information to the greater C/V team

Additional Responsibilities:

- Embody C/V's vision, processes, and core values
- Cross-sell and grow relationships throughout the office as applicable
- Stay current with culture, industry, and business trends
- Participate in and contribute to weekly brainstorming sessions, internal meetings, and company-owned events

DESIRED SKILLS & EXPERIENCE /

- BS/MS in Computer Science, Engineering, or equivalent work experience
- Mastery of latest JavaScript and web development trends (ES2016+)
- Experienced with React, single-page applications, and modern frontend paradigms. Will consider candidates with relevant experience with other modern UI libraries
- Experienced with UI toolkits and CSS-in-JS techniques and libraries
- Production experience shipping modern web applications in cloud environments
- Keen eye for good design and practical user experience/user interface design
- Bonus: Experience working with or implementing GraphQL services, experience with Node.js applications
- Bonus: Experience working with or implementing non-trivial webpack configurations, modern UI testing libraries and techniques

BENEFITS /

- Exceptional healthcare benefits; premiums are 100% covered by the company
- Opportunity to work on open source projects
- Competitive compensation
- 20 Days paid time off
- Ability to work remotely but with a close team
- Profit sharing participation for all team members
